

The world continues to move at an extraordinary pace and it is becoming ever more difficult to remember or think about the past. As such, a small volunteer group is attempting to identify in-service concrete pavements of historical significance such that we can develop a list of them with pertinent historical and location information. We are hoping to

develop more interest in this part of history and hopefully someday develop a repository for the information and perhaps even acquire pavement samples from them. For discussion purposes, we are foremost interested in in-service concrete pavements constructed prior to 1920. However, there are other reasons for a pavement being of historical interest besides age (such as those incorporating innovative feature of its time, one of a kind pavement, etc.), so please feel free to provide suggestions for any concrete pavement you think meets these criteria.

In addition to providing the pavement section, if you have or know where additional information exists could you also provide that. Also, if you would like to join our volunteer group, please let me know.

Thanks in advance for your efforts.
